

# Assessment

## Module 8: JavaScript Essentials and Advanced

### Scenario:

You are an intermediate JavaScript developer at **Swan Solution Pvt. Ltd.** The company wants a **Hotel Management System** to eliminate paper-based guest registration processes Web App. The app must be responsive, interactive, and follow good programming practices.

Core Functionality	
<b>1.Responsive Form Creation</b>	<ul style="list-style-type: none"><li>● Create a form with the following fields:<ul style="list-style-type: none"><li>○ Full Name (Text)</li><li>○ Phone Number (Number)</li><li>○ Email Address (Email)</li><li>○ Address (Textarea)</li><li>○ Aadhar Card Number (Number)</li><li>○ Check in date &amp; Check Out date (Date)</li><li>○ No of Adult</li><li>○ Purpose of visit (Textarea)</li></ul></li><li>● Mobile-friendly layout using <b>Bootstrap Grid</b></li></ul>
<b>2. Validation Rules with Advanced JavaScript</b>	<p><b>Class:</b> CustomerFormHandler</p> <ul style="list-style-type: none"><li>● validateForm() – Validate:<ul style="list-style-type: none"><li>○ Name <math>\geq</math> 3 characters</li><li>○ Phone exactly 10 digits</li><li>○ Valid email format (Regex)</li><li>○ Address details not empty</li><li>○ Aadhar Card Number : Exactly 12 digits</li><li>○ Check in date &amp; Check Out date : Future date validation</li></ul></li></ul>

	<ul style="list-style-type: none"> <li>○ No of Adult : Number Validation</li> <li>○ Purpose of visit : Required Field</li> </ul> <ul style="list-style-type: none"> <li>● saveToLocalStorage() – Save data as array in localStorage</li> <li>● clearForm() – Reset form after submission</li> <li>● showMessage() – Reusable UI message box for success/error</li> </ul> <p>Additional Requirements:</p> <ul style="list-style-type: none"> <li>● Use <b>event delegation</b> for handling form events</li> </ul> <p>Implement <b>real-time validation</b> (on input or blur)</p>
<b>3. View Submissions Page (view.html)</b>	<p><b>Class:</b> SubmissionViewer</p> <ul style="list-style-type: none"> <li>● Read from localStorage</li> <li>● Dynamically generate table of submissions</li> <li>● Search bar to filter by <b>Name</b> or <b>Date</b></li> <li>● Show “<b>No data found</b>” message if results empty</li> </ul> <p><b>Optional Bonus Tasks</b></p> <ul style="list-style-type: none"> <li>● Add <b>Delete</b> button to remove individual records</li> <li>● Use <b>utility module</b> for setItem() and getItem() (modularized code)</li> <li>● Implement <b>import/export</b> (&lt;script type="module"&gt; or bundler like Vite/Webpack)</li> </ul>

### Validation Rules

- All fields required
- Name  $\geq 3$  characters
- Phone exactly 10 digits
- Valid email format
- Complaint  $\geq 10$  characters

### Key Competencies Tested

- ES6 Classes & Modules
- DOM Manipulation & Event Handling
- Real-Time & Manual Form Validation
- LocalStorage CRUD Operations
- Dynamic HTML Rendering & Filtering
- Clean, Modular, and Reusable Code

### Reflective Thinking Questions

- How could this app be enhanced by integrating with an **API** (e.g., saving data to a backend)?
- How can error handling be improved for a better **user experience**?
- What security concerns arise when storing customer data in localStorage?
- Could the app be scaled into a **PWA** (Progressive Web App) for offline use?
